Matplotlib

Demonstrate creating various types of charts and plots using functions in matplotlib library

1 . Sarah bought a new car in 2001 for $24,000. The dollar value of her car changed each year as shown in the table below.

Value of Sarah's Car

Year	Value
2001	$24,000
2002	$22,500
2003	$19,700
2004	$17,500
2005	$14,500
2006	$10,000
2007	$ 5,800

Represent the following information using a line graph with following style properties

- **X- axis - Year**
  Y –axis - Car Value
- **title –Value Depreciation (left Aligned)**
- **Line Style dashdot and Line-color should be red**
- **point using * symbol with green color and size 20**

Subplot() provides multiple plots in one figure.

Code

```
import matplotlib.pyplot as plt

years = [2001, 2002, 2003, 2004, 2005, 2006, 2007]
car_values = [24000, 22500, 19700, 17500, 14500, 10000, 5800]

plt.figure(figsize=(10, 5))
plt.subplot(1, 1, 1)
```

```
plt.plot(years, car_values, 'r-.', label='Car Value', linewidth=2)

plt.scatter(years, car_values, c='green', marker='*', s=20, label='Data Points')

plt.xlabel('Year')
plt.ylabel('Car Value')
plt.title('Value Depreciation', loc='left')

plt.legend()

plt.grid(True)
plt.show()
```
Output

2. Following table gives the daily sales of the following items in a shop

Day	Mon	Tues	Wed	Thurs	Fri
Drinks	300	450	150	400	650
Food	400	500	350	300	500

Use subplot function to draw the line graphs with **grids(color as blue** and line style dotted) for the above information as 2 separate graphs in two rows

    a) Properties for the Graph 1:
- X label- Days of week
- Y label-Sale of Drinks
- Title-Sales Data1 (right aligned)
- Line –dotted with cyan color
- Points- hexagon shape with color magenta and outline black

    b) Properties for the Graph 2:
- X label- Days of Week
- Y label-Sale of Food
- Title-Sales Data2 (center aligned)
- Line –dashed with yellow color
- Points- diamond shape with color green and outline red

Code

```
import matplotlib.pyplot as plt
days = ['Mon', 'Tues', 'Wed', 'Thurs', 'Fri']
sales_drinks = [300, 450, 150, 400, 650]
sales_food = [400, 500, 350, 300, 500]

fig, axes = plt.subplots(2, 1, figsize=(8, 10))

axes[0].plot(days, sales_drinks, linestyle='dotted', color='cyan', marker='H',
markersize=8, markerfacecolor='magenta', markeredgecolor='black')
axes[0].set_xlabel('Days of week')
axes[0].set_ylabel('Sale of Drinks')
axes[0].set_title('Sales Data1', loc='right')
axes[0].grid(True, color='blue')
axes[1].plot(days, sales_food, linestyle='dashed', color='yellow', marker='D',
markersize=8, markerfacecolor='green', markeredgecolor='red')
```
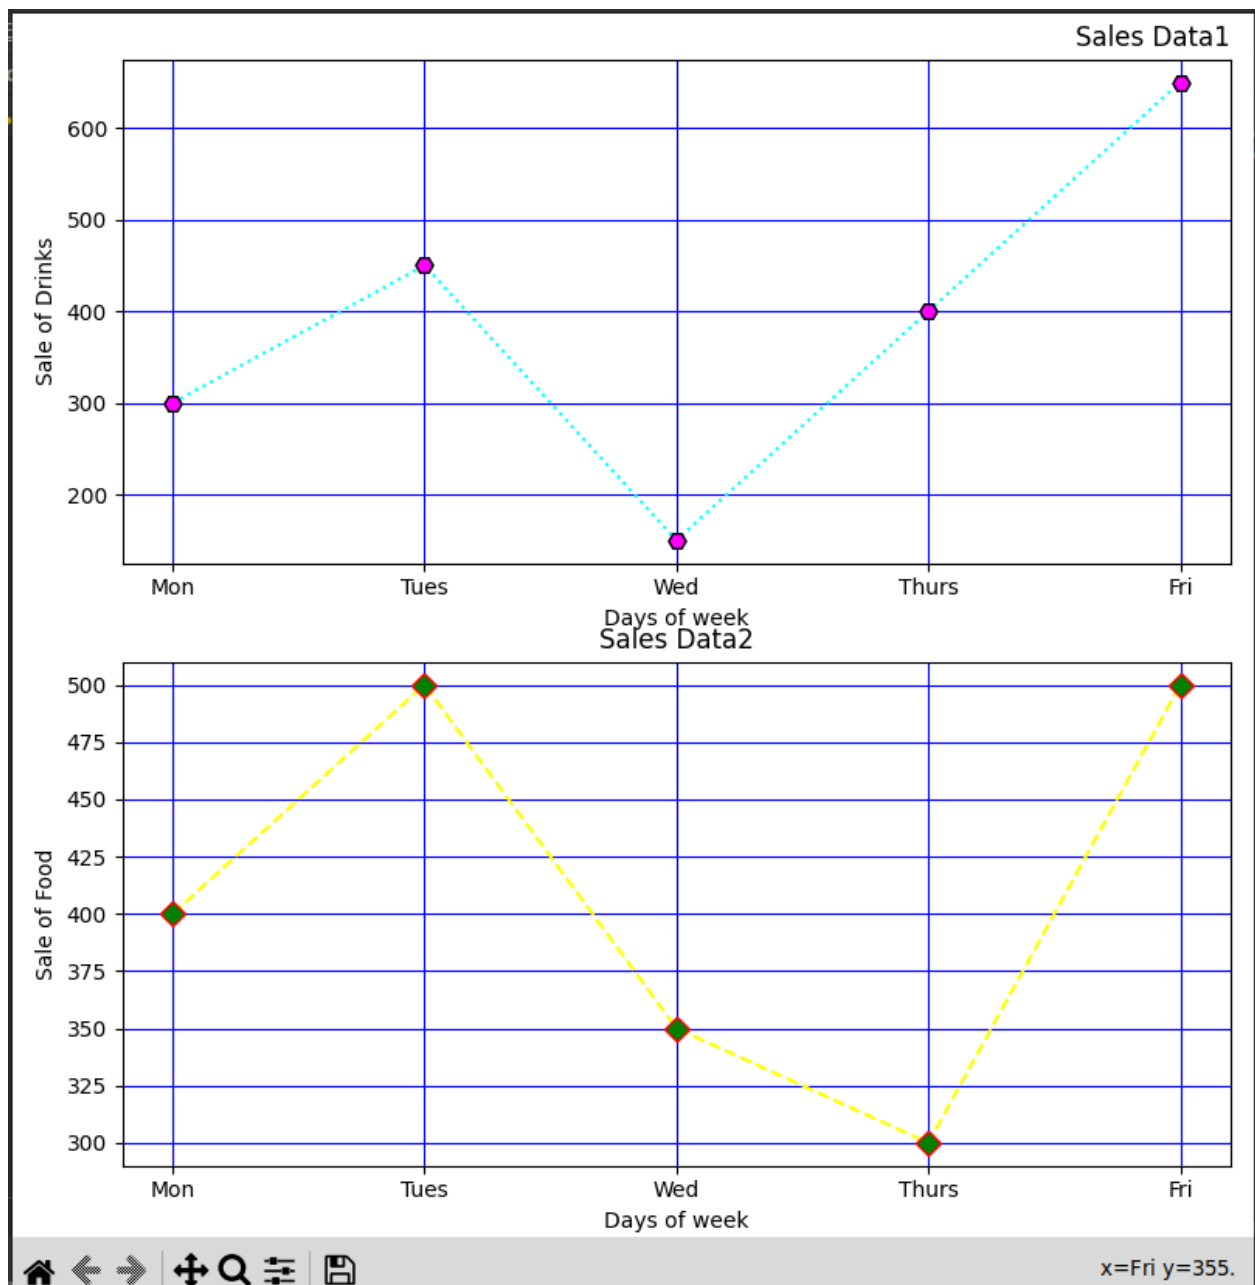

```
axes[1].set_xlabel('Days of week')
axes[1].set_ylabel('Sale of Food')
axes[1].set_title('Sales Data2', loc='center')
axes[1].grid(True, color='blue')
plt.tight_layout()

plt.show()
```

Output

3. Create scatter plot for the below data:(use Scatter function)

Product	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Affordable Segment	173	153	195	147	120	144	148	109	174	130	172	131
Luxury Segment	189	189	105	112	173	109	151	197	174	145	177	161
Super Luxury Segment	185	185	126	134	196	153	112	133	200	145	167	110

Create scatter plot for each Segment with following properties within one graph
- X Label- Months of Year with font size 18
- Y-Label- Sales of Segments
- Title –Sales Data
- Color for Affordable segment- pink
- Color for Luxury Segment- Yellow
- Color for Super luxury segment-blue

Code

```
import matplotlib.pyplot as plt

months = ['Jan', 'Feb', 'Mar', 'Apr', 'May', 'Jun', 'Jul', 'Aug', 'Sep', 'Oct', 'Nov', 'Dec']
affordable_sales = [173, 153, 195, 147, 120, 144, 148, 109, 174, 130, 172, 131]
luxury_sales = [189, 189, 105, 112, 173, 109, 151, 197, 174, 145, 177, 161]
super_luxury_sales = [185, 185, 126, 134, 196, 153, 112, 133, 200, 145, 167, 110]

plt.figure(figsize=(12, 6))
plt.scatter(months, affordable_sales, color='pink', label='Affordable Segment')
plt.scatter(months, luxury_sales, color='yellow', label='Luxury Segment')
plt.scatter(months, super_luxury_sales, color='blue', label='Super Luxury Segment'
plt.xlabel('Months of Year', fontsize=18)
plt.ylabel('Sales of Segments', fontsize=18)
plt.title('Sales Data', fontsize=20)
plt.legend()

plt.grid()
plt.show()
```
Output

4 Display the above data using multiline plot(3 different lines in same graph)
- Display the description of the graph in upper right corner(**use legend()**)
- Use different colors and line styles for 3 different lines

Code

```
import matplotlib.pyplot as plt
months = ['Jan', 'Feb', 'Mar', 'Apr', 'May', 'Jun', 'Jul', 'Aug', 'Sep', 'Oct', 'Nov', 'Dec']
affordable_sales = [173, 153, 195, 147, 120, 144, 148, 109, 174, 130, 172, 131]
luxury_sales = [189, 189, 105, 112, 173, 109, 151, 197, 174, 145, 177, 161]
super_luxury_sales = [185, 185, 126, 134, 196, 153, 112, 133, 200, 145, 167, 110]

plt.figure(figsize=(12, 6))
plt.scatter(months, affordable_sales, color='pink', label='Affordable Segment')
plt.scatter(months, luxury_sales, color='yellow', label='Luxury Segment')
plt.scatter(months, super_luxury_sales, color='blue', label='Super Luxury Segment')

plt.xlabel('Months of Year', fontsize=18)
plt.ylabel('Sales of Segments', fontsize=18)
```
```python
plt.title('Sales Data', fontsize=20)
plt.legend()

plt.grid()
plt.show()
```

Output

5. 100 students were asked what their primary mode of transport for getting to school was. The results of this survey are recorded in the table below. Construct a bar graph representing this information.
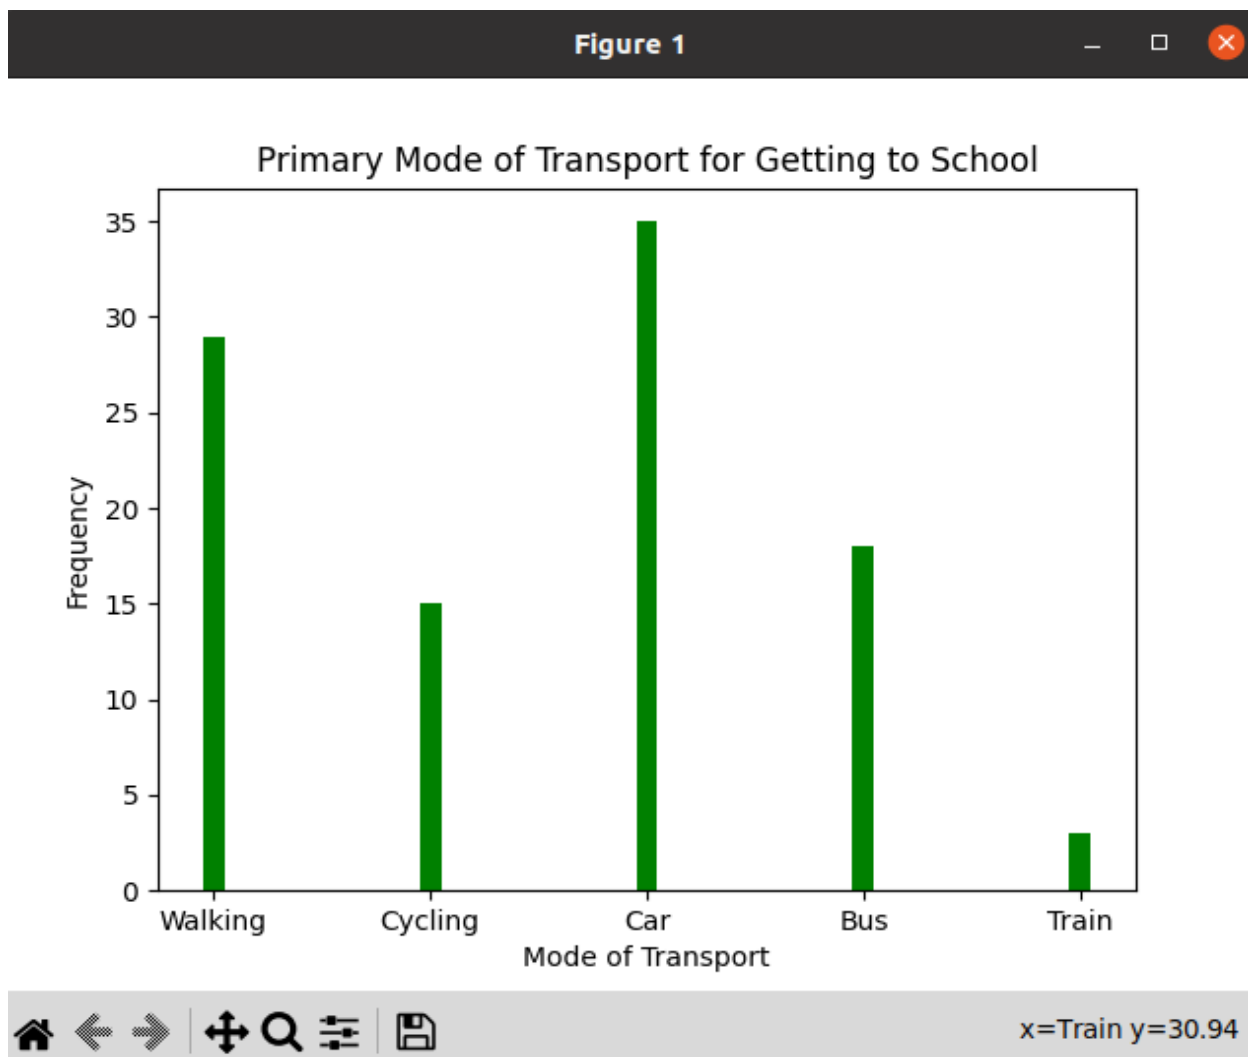

Mode of transport	Frequency
Walking	29
Cycling	15
Car	35
Bus	18
Train	3

Code

```python
import matplotlib.pyplot as plt
modes = ["Walking", "Cycling", "Car", "Bus", "Train"]
frequencies = [29, 15, 35, 18, 3]
width = 0.1
color = "green"
plt.bar(modes, frequencies, width=width, color=color)
plt.xlabel("Mode of Transport")
plt.ylabel("Frequency")
plt.title("Primary Mode of Transport for Getting to School")

plt.show()
```

Output

6. Create a bar graph with
- X axis -mode of Transport and Y axis 'frequency'
- Provide appropriate labels and title
- Width .1, color green

We are provided with the height of 30 cherry trees.
The height of the trees (in inches): 61, 63, 64, 66, 68, 69, 71, 71.5, 72, 72.5, 73, 73.5, 74, 74.5, 76, 76.2, 76.5, 77, 77.5, 78, 78.5, 79, 79.2, 80, 81, 82, 83, 84, 85, 87.Create a histogram with a bin size of 5

Code

```
import numpy as np
import matplotlib.pyplot as plt

tree_heights = np.array([61, 63, 64, 66, 68, 69, 71, 71.5, 72, 72.5, 73, 73.5, 74, 74.5, 76, 76.2, 76.5,
77, 77.5, 78, 78.5, 79, 79.2, 80, 81, 82, 83, 84, 85, 87])

bin_size = 5

hist, bins = np.histogram(tree_heights, bins=np.arange(min(tree_heights), max(tree_heights) +
bin_size, bin_size))

plt.hist(tree_heights, bins=bins, edgecolor='black', alpha=0.7)
plt.xlabel('Tree Height (inches)')
plt.ylabel('Frequency')
plt.title('Tree Height Histogram')
plt.grid(axis='y', linestyle='--', alpha=0.7)

plt.show()
```
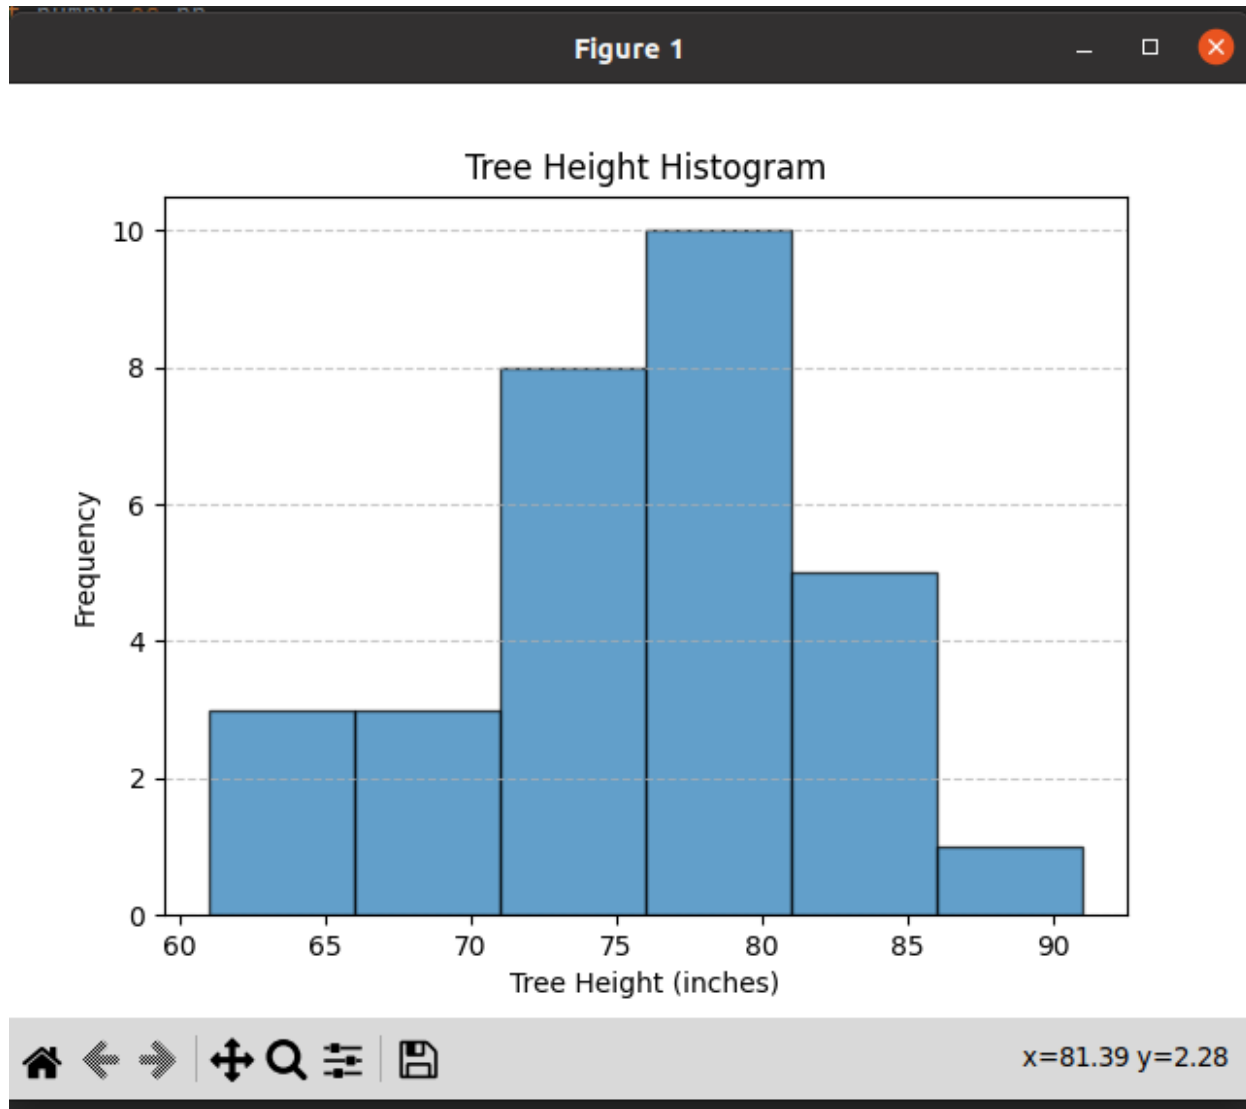

7. Using the pandas function read_csv(), read the given 'iris' data set.

i) Display Shape of the data set.

ii) First 5 and last five rows of data set(head and tail).

iii) Size of dataset.

iv) No. of samples available for each variety.

v) Description of the data set(use describe).

Code

```
import pandas as pd
print("Name: Aswathy Chandran")
print("Reg No: SJC22MCA-2016")
print("Batch: 22-24")
print()
data = pd.read_csv('iris.csv')

size = data.size
print("Size = {}".format(size))
print()

print(data.head(5))
print()
print(data.tail(5))
print()

shape = data.shape
print("Shape = {}".format(shape))
print()
occur = data.groupby(['variety']).size()

print('Occurrences of variety',occur)
```

```
print()

print(data.describe())
```

Output

```
/home/sjcet/PycharmProjects/pythonProject/venv/bin/python /home/sjcet/PycharmProjects/pythonProject/c3q7.py
Name: Aswathy Chandran
Reg No: SJC22MCA-2016
Batch: 22-24

Size = 750

Process finished with exit code 0
```

8. Use pairplot() function in seaborn to display pairwise relationships between attributes.

Try different kind of plots {'scatter', 'kde', 'hist', 'reg'} and different kind of markers.

Code

```
import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt
data = pd.read_csv('iris.csv')
sns.pairplot(data, kind="scatter")
plt.show()

sns.pairplot(data, kind="hist")
plt.show()

sns.pairplot(data, kind="kde")
plt.show()

sns.pairplot(data, kind="reg")
plt.show()

sns.pairplot(data, hue="variety", kind="scatter" , markers=["o", "s", "D"])
plt.show()
```
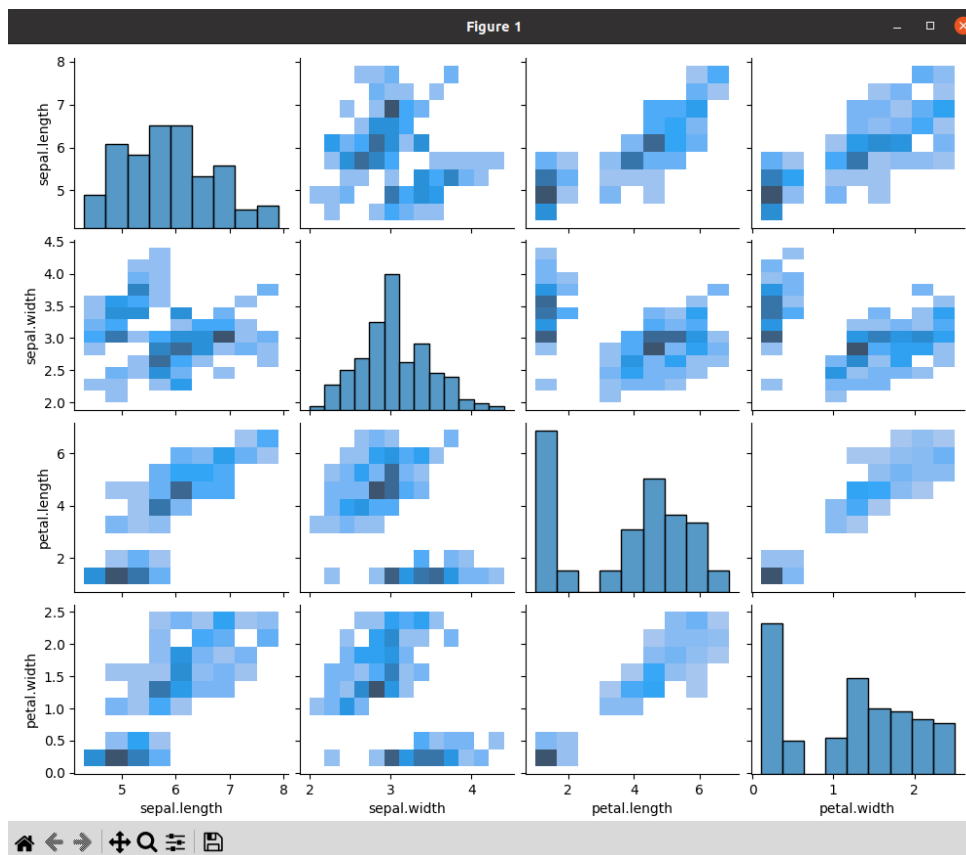

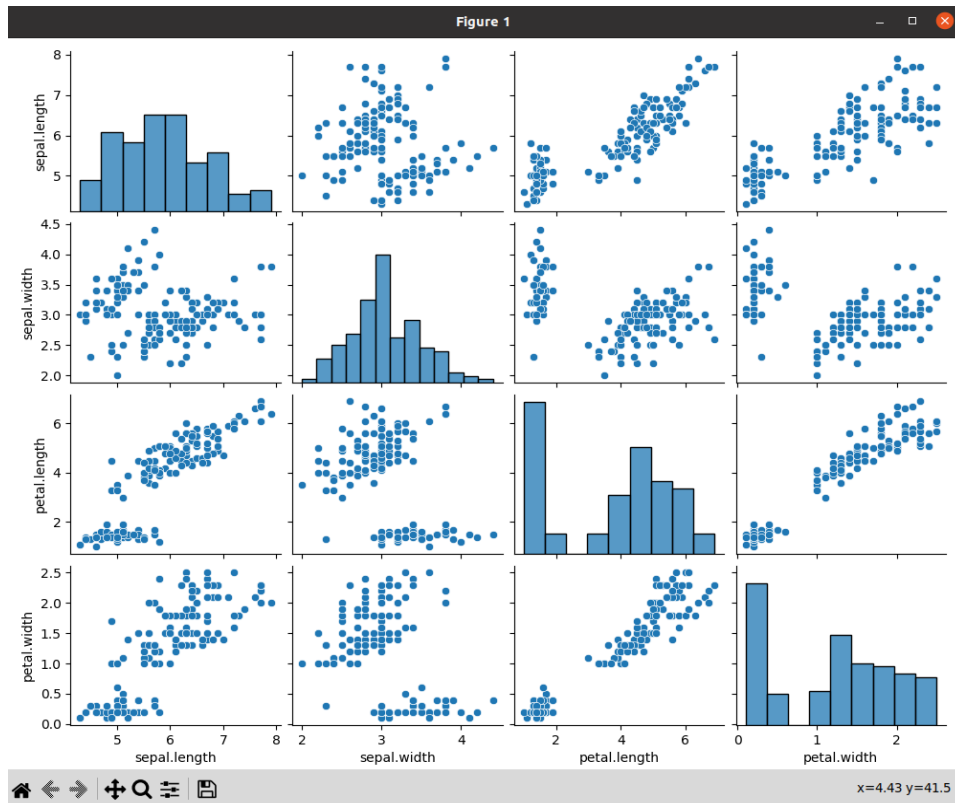

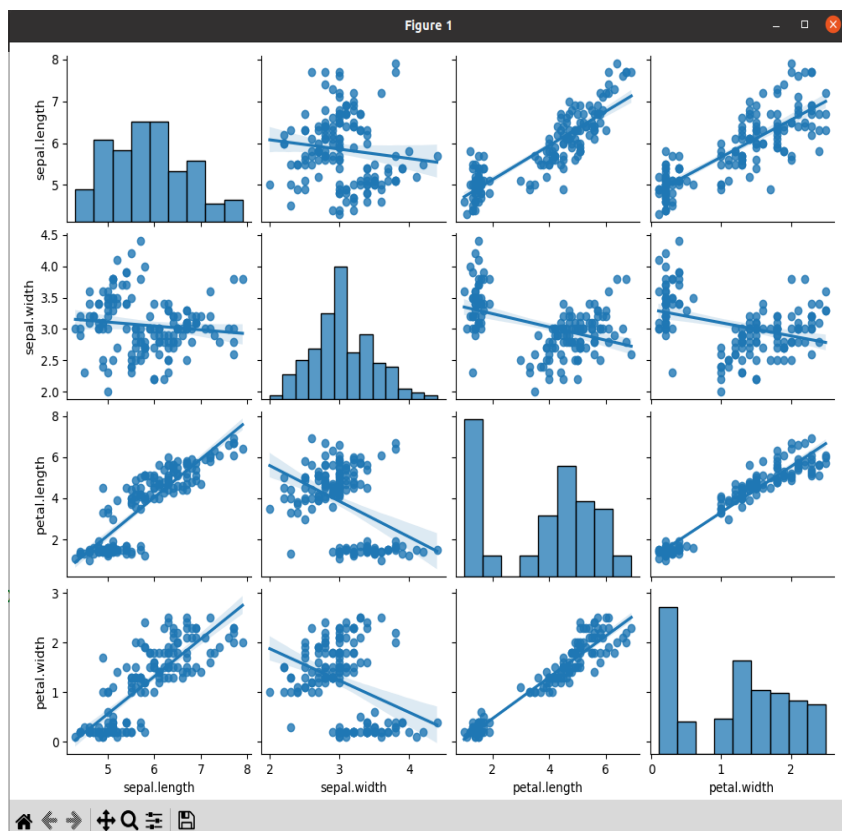

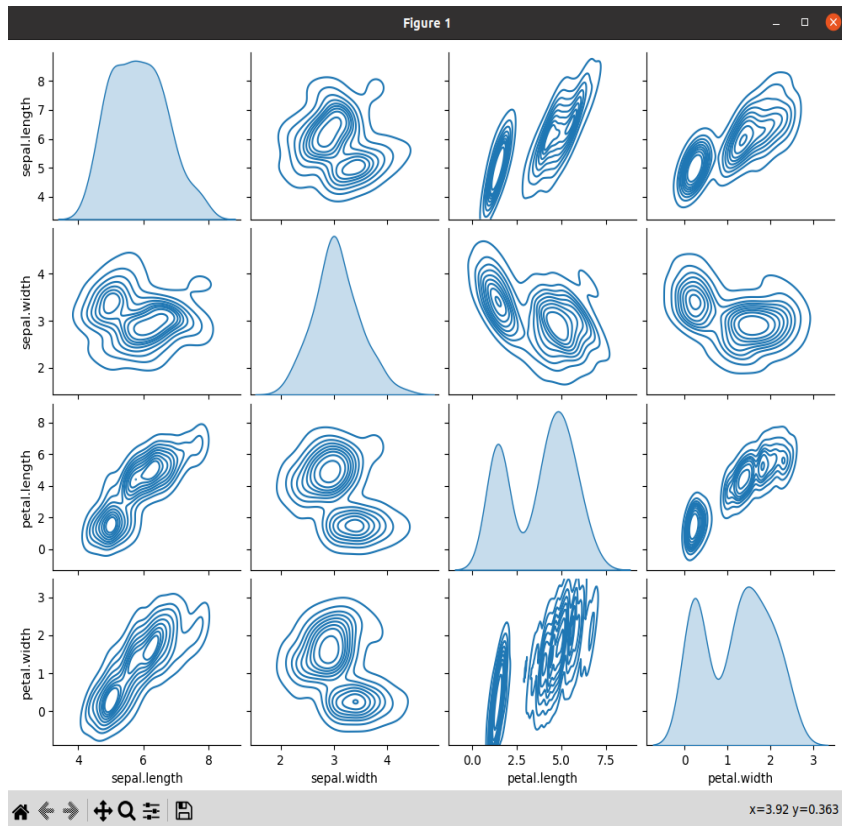

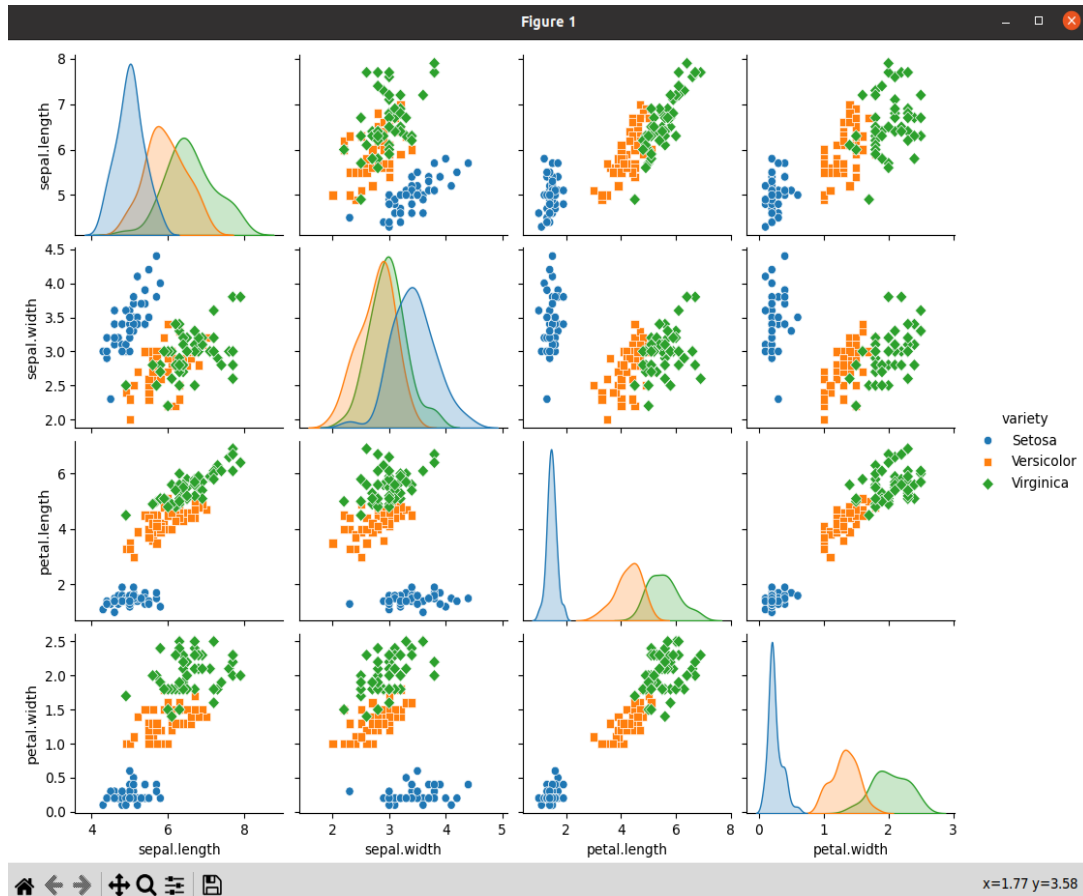

9. Using the iris data set,get familiarize with functions:

1) displot()

2) histplot()

3) relplot()

Note: import pandas and seaborn packages

Code

```
import seaborn as sns
import matplotlib.pyplot as plt
import pandas as pd
```

```
iris_data = pd.read_csv("iris.csv")

sns.displot(data=iris_data, x="sepal.length", kde=True, color="red")

plt.title("Distribution of Sepal Length")

plt.show()

sns.histplot(data=iris_data, x="sepal.width", bins=10, color="black")

plt.title("Histogram of Sepal Width")

plt.show()

sns.relplot(data=iris_data, x="sepal.length", y="sepal.width", hue="variety",
kind="scatter", palette="Set1")

plt.title("Scatter Plot of Sepal Length vs. Sepal Width")

plt.show()
```

Output
